

Patent Information: Atmospheric Water Generators (AWG)

History: In 1933 Norman Gay filed the original patent (#1931347) of producing water from air. In 1946 Bernard Granville filed a patent (#2409624), Francis Wight in 1962 (#3035418) and Rollin Swanson in 1971(#3,675,442).

Current Fact: The ‘water from air’ patents for ‘atmospheric water generators’ and other filtration processes are now public domain. The Patents controlled by our manufacturing process involve intricacies of how to keep the water completely & continually bacteria free and also patents involving compression systems to optimize the amount of water produced. Based upon the aforementioned patents and our company trade secrets applied that are imbedded into the assembly of our units there has never been a lawsuit or a complaint with the ‘BBB’ concerning our generated water and/or our company. However, unfortunately there are a host of other corporations and/or individuals that claim to have sole patent and marketing rights to the AWG products and in doing so sometimes use misleading and inaccurate scare tactics stating they hold all rights and you must buy from them, unfortunately this can and does happen. Patents are easy to file, however if the patent is on a process or product that results in the units having heterotrophic bacterial contamination, then how enforceable & valuable is that patent?

The patents applied and accredited to our appliances are 100% and are continually bacteria free. We are to date completely unaware of any other company that has been able to overcome their heterotrophic bacteria problems, engineering flaws, QC problems or have even been able to obtain certifications enabling their units to be legally sold in the U.S. or CE certification for the European marketplace. Even withstanding the case that there was indeed viable competition out there, there is plenty of room in this industry for hundred’s of manufacturer’s.

PlanetsWater has a distinguished track record of no one challenging our company or the patents on our products.

Our aim is to provide the planet with pure fresh drinking water that will benefit mankind and we strive to continually improve our products and services in the belief that we can at least help make a difference to the unfortunate but increasingly apparent problems with worldwide water availability and distribution.

Water – A source of Life.....
