

CLEAN WATER IS NOT ONLY IMPORTANT TO HUMANS, IT'S ALSO PART OF THE LARGER ECOSYSTEM.

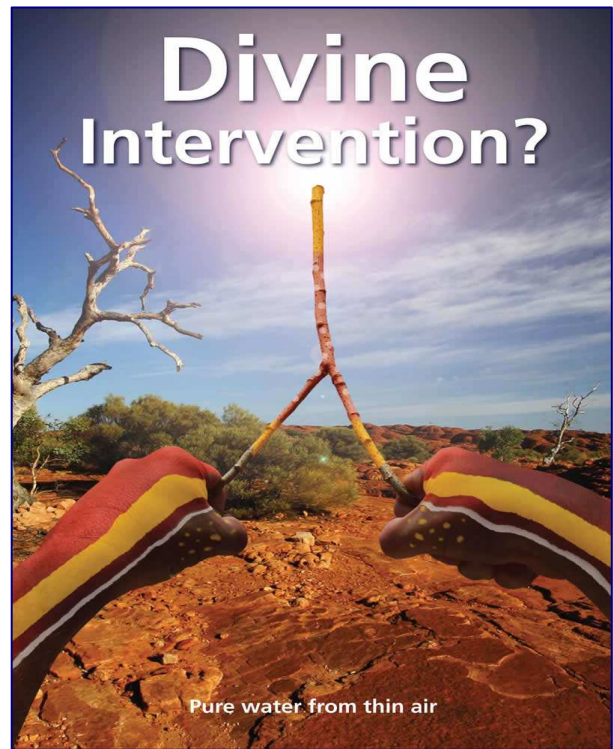

'PLANETSWATER' strive not only to make pristine, healthy water accessible and affordable to everybody throughout the globe, we also aim and strive to make it sustainable. Therefore the more 'self-sufficient' we make achieving pure clean water, the more sustainable it can be. To that end, we are making it our mission to not only provide the perfect renewable water solution, but also smart, eco-friendly ways in providing the power required to make that water so as to create the perfect solution to all our water needs whether that need may be in a dependable remote location or as part of an environmentally friendly 'green energy' as a alternative power source regardless of location.... 'PLANETS-ENERGY'

Along with our pioneering advances in **Atmospheric Water Generation (AWG)** we have also invested both time and money in the processes that make it possible: **Energy!**

WORLD'S 1ST 'SOLAR POWERED' AWG UNITS

PLANETSWATER PWG-30L + SOLAR PANEL KIT \$4,495.00 2000 Watt Peak Solar Kit – Panels, Controller 40A/24V, Inverter, Cabinet, Cables. 1 x 300 Watt Solar Panel (1x27KG)

This 'PLANETS-ENERGY' Solar Panel Kit will allow the PWG-30L to generate up to 3 Gallons of pure water per day which is depending on humidity and sun conditions. Larger commercial/industrial 'AWG' 100/200/500/1000/2000/3000/5000L units can all be powered by alternative solutions as our ongoing research intensifies even further.

The vast majority of those in need of clean drinking water are located in rural villages in developing countries, without access to electricity or an improved water source. Therefore the atmospheric water generation 'AWG' products can be powered by an alternative energy source as shown!
